CalDigit Provides Support for Mac OS X 10.7 Lion

CalDigit has announced support for Mac OS X 10.7 Lion throughout their line of storage solutions and interface cards.

Because of CalDigit's close relationship with Apple, support for the HDPro2, HDOne, CalDigit RAID Card/ HDElement, CalDigit VR and CalDigit VR mini are built right into Lion, and does not need any additional drivers installed. However, new versions of companion software such as RAID Tool and RAID Shield can be downloaded from CalDigit's support page at http://www.caldigit.com/support.asp.

CalDigit's line of USB 3.0 and 6G SATA products also support Mac OS X 10.7 Lion. Drivers for these products can be downloaded from CalDigit's support page at http://www.caldigit.com/support.asp.

About CalDigit (www.caldigit.com)

CalDigit has specialized in creating storage solutions for creative professionals for over ten years. CalDigit was the first to provide external PCIe storage as well the first to bring USB 3.0 to the Mac. CalDigit products are designed to provide users with reliability, performance, style and flexibility. CalDigit is a single vendor support company; we design, build, and assemble all of our products. This results in the ability to provide users with unparalleled support and service. Corporate headquarters are located in Orange County, California, with local branches in Asia and Europe.
